

# Its time to reduce operational costs and increase performance and profits.

Today, there's a better, more cost efficient and environmentally friendly way to clean amine systems. Around the world, leading refineries, gas plants, ammonia plants and synthesis gas plants, depend on our patented HSSX® process to clean millions of gallons of amine solutions. Our patented proprietary HSSX technology provides the advantages you are looking for:

- Non-hazardous, biodegradable effluent is suitable for discharge to your Waste Water Treatment Plant.
  - Continuously cleaning amine systems on line with our Amine Shield™ slipstream unit (SSU).
  - Efficiently removes suspended solids utilizing our patented and regenerable SSX™ Process
  - Removes hydrocarbons (including BTX) utilizing our patented and regenerable HCX™ Process
  - Removes heat stable salts utilizing our patented and regenerable HSSX Process
- Periodic amine system cleanings either off-line or on-line resulting in over 99% recovery of amine cleaned
- HSSX Process water and chemical requirements have been reduced by 50% or more.
